

Plug in - hang up - read out

## CRid

„Plug and Play" card reader for your needs

Each card holds at least one piece of information: the card ID. This ID number is unique and therefore clearly identifiable. When a card is issued, it is assigned to the card ID. Depending on the requirements, pre-defined information can be read from the card with the help of a card reader. Furthermore, information is automatically entered into the necessary fields.

The areas of application for card readers are varied. Every organization that coordinates its members using cards, will find different ways of using card readers in practice.
